

News release no. 7/2024

2024.07.23

### Iceland Leading Indicator – Dimmer outlook – CLI continues to fall

The Iceland Composite Leading Indicator (CLI) continued falling in June. The development of individual components has become clearer, indicating slower growth or a recession ahead. The length of the contractionary period indicates dimmer outlook for the coming months. Furthermore, the preliminary GDP figures for the first quarter of 2024 and the last two quarters of 2023 indicate that the signal of slower growth or a potential contraction ahead is materializing.

Three out of six CLI components fall on the previous month. A drop in the Gallup index of Consumer Confidence, a contraction in imports of merchandise and a lower growth of tourist arrivals have the largest impact. International political developments continue as a source of considerable uncertainty as does uncertainty regarding global economic developments.

Turning points of the CLI tend to precede turning points in economic activity relative to trend by approximately six months. Economic activity in terms of GDP is measured by Statistics Iceland. The calculation of Analytica's CLI is based on methodology adopted by the OECD.

#### Chart 1. GDP and Analytica's CLI – Trend Adjusted

Long term trend = 100

Chart 1 depicts Analytica's CLI together with trend adjusted GDP. The chart shows that the CLI leads GDP on average by around six months.

Chart 2 depicts the developments of the Gallup index of Consumer Confidence seasonally adjusted and smoothed for the period 2007-2024. This is one of the CLI components and empirically it provides an early indication of the business cycle.

The dark blue curve in chart 2 shows the deviation of the Consumer Confidence index from the long-term trend whereas the brown curve depicts the index year on year change. The index falls during the month but other than that its development has not been noteworthy in the past few months. The index fall indicates increasing public pessimism and perhaps even more so than reflected by the chart.

**Chart 2. The Gallup Index of Consumer Confidence – Deviation from long term trend and YoY %-change**  
Seasonally adjusted and smoothed

The same curves as shown in chart 2 are depicted in the Appendix charts A1 and A2. The purpose of chart 2 is to highlight developments of the index.

There are six components of Analytica’s CLI. These are: Fish catches, inflation adjusted debit card turnover, number of tourists visiting Iceland, the MSCI World equities index, inflation adjusted imports and the Gallup Index of Consumer Confidence. For the month of June, four out of six underlying components decline year on year. However, three out of six components fell on the previous month. See Appendix, Charts A1 and A2.<sup>1</sup>

Some revisions to the CLI values have taken place. This is a result of component revisions and in part a result of the methodology employed, including the long-term trend estimate.

<sup>1</sup> The series in chart A2 are now shown in a standardized form, i.e. all series adjusted for mean=0, standard deviation=1.

Table 1 shows the development of the CLI during the past twelve months. The index for June falls on the month and takes the value of 98.0. This serves as an indicator of economic activity six months into the future, i.e. December 2024. A value of 100 indicates GDP in line with its long-term trend.

**Table 1. Analytica's CLI 2023-2024**

	<u>Index</u>	<u>Change in %</u>		<u>Indication for month</u>
		<u>on month</u>	<u>YOY</u>	
<b>2023</b>				
June	101.1	-0.4%	-2.2%	Dec. 2023
July	100.9	-0.2%	-2.3%	Jan. 2024
August	100.8	-0.1%	-2.2%	Feb.
September	100.7	-0.2%	-2.1%	March
October	100.2	-0.5%	-2.4%	April
November	99.6	-0.5%	-2.8%	May
December	99.2	-0.4%	-3.2%	June
<b>2024</b>				
January	98.9	-0.4%	-3.6%	July
February	98.6	-0.3%	-4.0%	August
March	98.4	-0.2%	-4.2%	Sept.
April	98.2	-0.2%	-3.9%	Oct.
May	98.1	-0.1%	-3.5%	Nov.
June	98.0	-0.1%	-3.1%	Dec.

The July Composite Leading Indicator is scheduled for release on September 10, 2024.
