

News release no. 3/2025

2025.02.20

Iceland Leading Indicator – Many positive indicators but considerable uncertainty

The Analytica Composite Leading Indicator (CLI) for Iceland rose in February for the sixth consecutive month. Based on standard methods for identifying turning points the CLI now provides a significant indication of an improved GDP outlook.

Five out of six CLI components rise on the previous month. On the positive side the Gallup index of consumer confidence improves and so do fish catches. Moreover, merchandise imports volume appears to be increasing, and domestic debit card turnover is improving. International political developments continue as a source of considerable uncertainty no less than before as does uncertainty regarding global economic developments.

Turning points of the CLI tend to precede turning points in economic activity relative to trend by approximately six months. Economic activity in terms of GDP is measured by Statistics Iceland. The calculation of Analytica's CLI is based on methodology adopted by the OECD.

Chart 1. GDP and Analytica's CLI – Trend Adjusted

Long term trend = 100

Chart 1 depicts Analytica's CLI together with trend adjusted GDP. The chart shows that the CLI leads GDP on average by around six months.

Chart 2 depicts the development of domestic debit card turnover at domestic retailers for the period 2007-2025. The figures are at fixed prices and seasonally adjusted and smoothed. Debit card turnover is one of the CLI components and empirically it provides an early indication of the business cycle. This means that turning points in debit card turnover tend to appear earlier than the CLI turning points but with less reliability.

The dark blue curve in chart 2 shows the deviation of debit card turnover from the long-term trend whereas the brown curve depicts the debit card turnover year on year change. The sharp decline in real domestic debit card spending seems to be in a reversal year on year. Also, the deviation from long term trend improves in February.

Chart 2. Debit card turnover – Deviation from long-term trend and YoY %-change
Seasonally adjusted and smoothed at fixed prices

The same curves as shown in chart 2 are depicted in the Appendix charts A1 and A2. The purpose of chart 2 is to highlight developments of the index.

There are six components of Analytica’s CLI. These are: Fish catches, inflation adjusted debit card turnover, number of tourists visiting Iceland, the MSCI World equities index, inflation adjusted imports and the Gallup Index of Consumer Confidence. For the month of February, four out of six underlying components decline year on year. However, five out of six components rose on the month. See Appendix, Charts A1 and A2.¹

¹ The series in chart A2 are now shown in a standardized form, i.e. all series adjusted for mean=0, standard deviation=1.

Some revisions to the CLI values have taken place. This is a result of component revisions and in part a result of the methodology employed, including the long-term trend estimate.

Table 1 shows the development of the CLI during the past twelve months. The index for February rises on the month and takes the value of 99.7. This serves as an indicator of economic activity six months into the future, i.e. August 2025. A value of 100 indicates GDP in line with its long-term trend.

Table 1. Analytica's CLI 2024-2025

	<u>Index</u>	<u>Change in %</u>		<u>Indication for month</u>
		<u>on month</u>	<u>YOY</u>	
2024				
February	98.9	-0.3%	-3.5%	August
March	98.7	-0.3%	-3.9%	Sept.
April	98.3	-0.3%	-3.8%	Oct.
May	98.1	-0.3%	-3.6%	Nov.
June	97.8	-0.3%	-3.5%	Dec.
July	97.6	-0.2%	-3.5%	Jan. 2025
August	97.6	0.0%	-3.4%	Feb.
September	97.8	0.2%	-3.2%	March
October	98.1	0.3%	-2.4%	April
November	98.5	0.4%	-1.5%	May
December	98.9	0.4%	-0.7%	June
2025				
January	99.3	0.4%	0.1%	July
February	99.7	0.4%	0.8%	August

The March Composite Leading Indicator is scheduled for release on April 23, 2025.
